

HANDBOOK & PROGRESS REPORT

Everything we've built, working, live at rcorthocare.made-by-ac.com.

A walkthrough of the patient website, the Ramu AI assistant, online booking, and the admin dashboard — with real screenshots — plus an honest status of what's done and what's still ahead.

WHERE THINGS STAND

Progress overview

Four modules make up the project. The site, booking, and admin dashboard are live and in daily use. WhatsApp is running as a manual flow for now — the reason why is explained on this page, plainly.

4

Modules built

3

Fully live

2

Languages (EN / తెలుగు)

1

Manual workaround, in progress

A. Patient website

 100%**Homepage — hero, live "doctor in today" card, services, reviews, hours**

Pulls real Google reviews and today's consulting status automatically

Live

Mobile & tablet layout

Fully responsive — tested on phone, tablet, and desktop

Live

PWA — installable, works from home screen

Patients can "Add to Home Screen" for app-like access

Live

B. Ramu — the on-site AI assistant

 100%**Answers timings, fees, location, doctor-in-today status**

Same logic that powers the WhatsApp-style flow, embedded directly on the site

Live

Bilingual — English & Telugu, switchable mid-chat

One tap toggles the whole conversation's language

Live

C. Online booking & admin dashboard

 100%**Patient self-booking — pick a day, a 10-minute slot, confirm**

Slots update live against the real database, no double-booking possible

Live

Admin — Today's queue, walk-ins, live token/serving number

Front desk runs the whole day from this one screen

Live

Admin — Schedule, Patients, Revenue tabs

Consulting hours, patient history, and collections all in one dashboard

Live

D. Automated WhatsApp confirmations

 In progress**Booking confirmation / cancellation texts, sent by staff**

Front desk sends these manually today — takes a minute per booking, works fine at current volume

Manual for now

Automatic WhatsApp send, no staff step

The clinic's WhatsApp Business account is verified and live with Meta, and the automated send is wired directly through Meta's own platform, since the WhatsApp reseller we first tried turned out to charge for this even on their free tier. The one step left is Meta approving the exact wording of the confirmation and cancellation texts themselves — a standard review, separate from the verification that already cleared

Wording pending approval

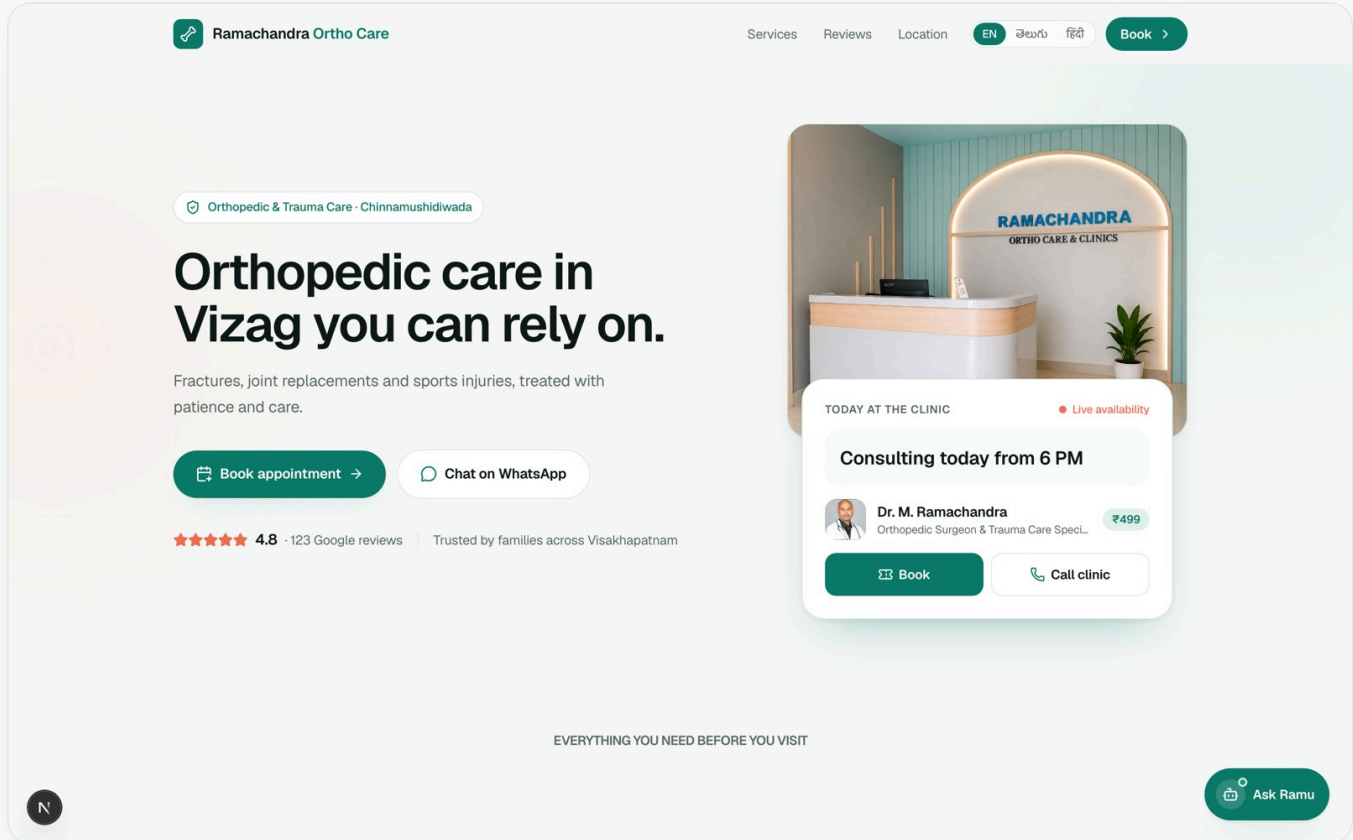

PLAINLY PUT

Nothing is broken — bookings, confirmations, and cancellations all reach the patient today, just with one manual step for staff. Verification is done; we're closing the last step so it sends itself.

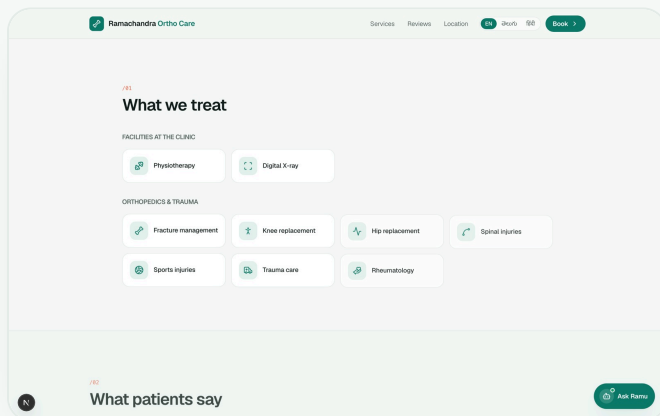

MODULE A

The patient website

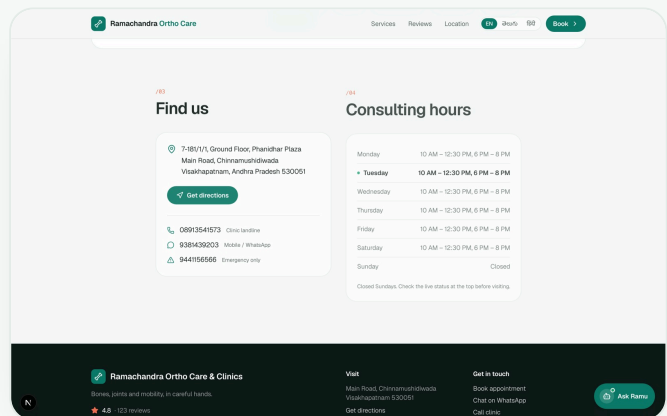

The front door — what a patient sees first, on their phone or a desktop, whether they're checking if the doctor is in or looking up the address before a visit.

Homepage — live "Today at the clinic" card shows whether the doctor is in, the fee, and one-tap Book / Call buttons.

What we treat — every listed service, grouped clearly.

Address, phone numbers, and consulting hours — always accurate, pulled from the same schedule the front desk edits.

MODULE A, CONTINUED

Trust signals

Real Google reviews build confidence before a first visit — pulled straight from the clinic's own listing.

What patients say

★★★★★ 4.8 · 123 Google reviews

S

Sai Sanju

5 months ago

★★★★★

Excellent doctor (Dr. Ramachandra sir), very kind, good listener, and good communication with patients, and friendly staff. I am very happy to visit Ramachandra Ortho Care and Clinic.

M

MVS Ravishankar

2 years ago

★★★★★

My father is 85 and got a left femur break. He underwent surgery and recovered excellently within two months. My dad is now walking without a stick and uses stairs daily. We are very happy and grateful.

S

sudheer maggi

a year ago

★★★★★

Best orthopedician in Vizag city. He treated my 1-year-old daughter when she had a pulled elbow, even though the clinic timings were closed. Very friendly, with patience.

S

Sarada Pradeep

7 months ago

★★★★★

I am very grateful to Dr. Ramachandra sir. My son fractured his foot, for which I took him to Ramachandra clinic. Very friendly environment, all the staff are very supportive.

S

surya Beesetti

6 months ago

★★★★★

I had a very good experience at this ortho care clinic. The doctor listened patiently, explained the problem clearly, and suggested effective treatment. The clinic is clean, well-maintained, and the staff is polite and supportive.

V

Vara Prasad

2 years ago

★★★★★

Doctor is very good. He first understands the patient's problem, diagnoses, then gives the perfect solution. He is not commercial. Very friendly with patients.

S

Sai Sanju

5 months ago

★★★★★

I highly recommend Dr. Ramachandrudu for his exceptional orthopedic care. Sir expertly performed my leg operation with precision and professionalism. His approachable nature, patient listening, and clear explanations put me at ease.

P

Prasanth M

a month ago

★★★★★

Really very good doctor and expert in orthopedics. Very kind and very friendly doctor.

S

Sai Sanju

5 months ago

★★★★★

Doctor takes time to listen to patient concerns and responds well. He gives support both mentally and physically to the patient, which is

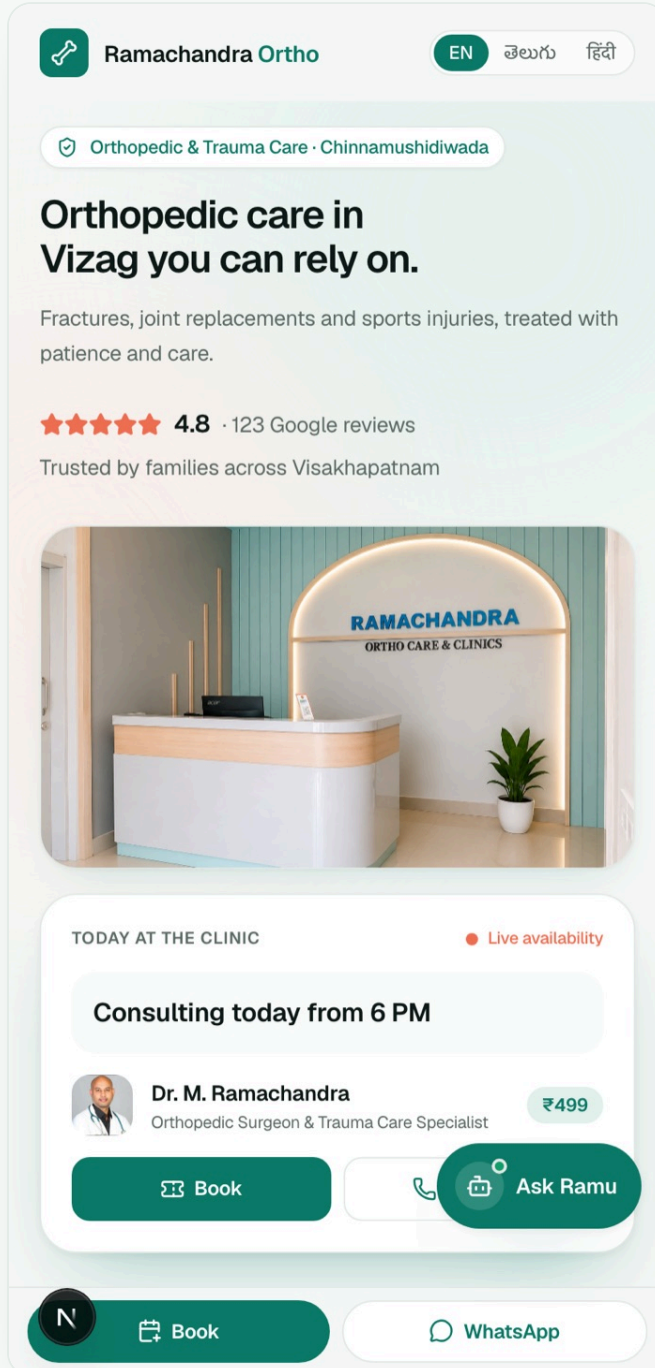

Ask Ramu

4.8★ across 123 Google reviews, shown right on the homepage.

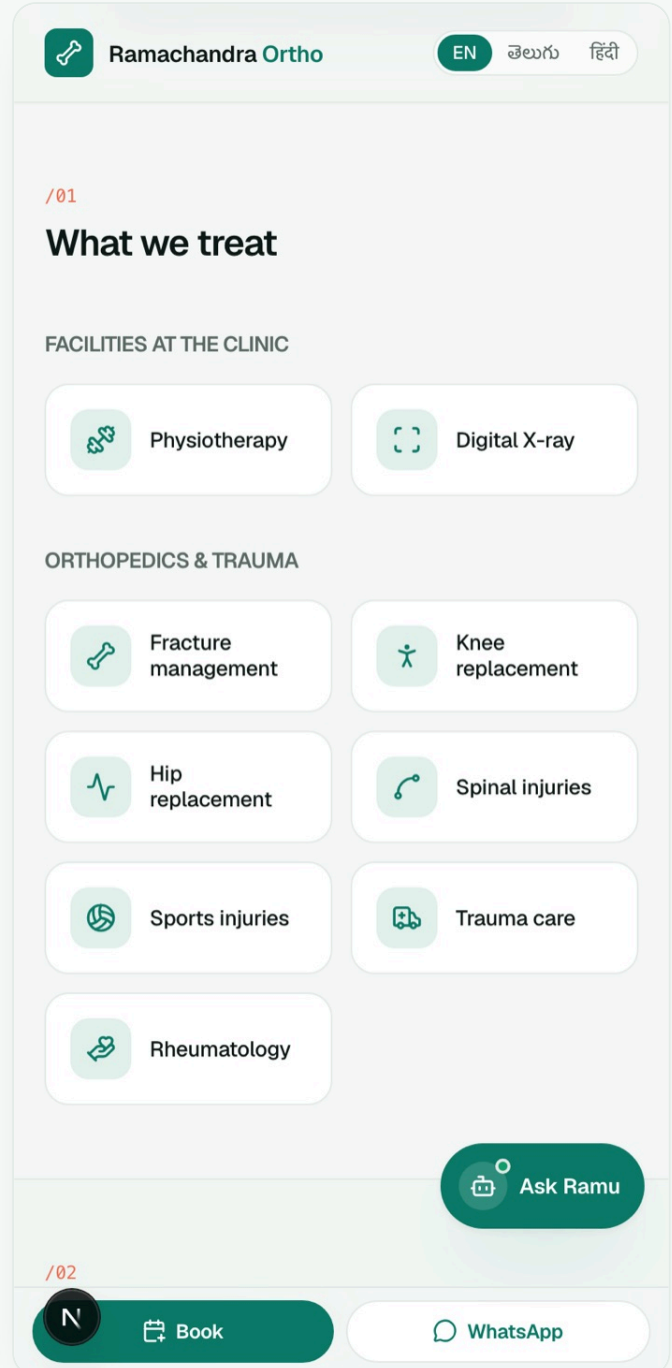

MODULE A, CONTINUED

Built mobile-first

Most patients will open this on a phone before anything else — so mobile isn't a shrunk-down afterthought, it's the primary layout the site was designed around.

Mobile hero — same live availability card, built for a thumb, not a mouse.

Services on mobile — nothing cramped, nothing hidden behind extra taps.

MODULE B

Ramu, the on-site assistant

Named after the clinic itself — Ramu answers the questions patients usually call the front desk for, right on the website, in English or Telugu, any time of day.

Always-visible, one tap to open

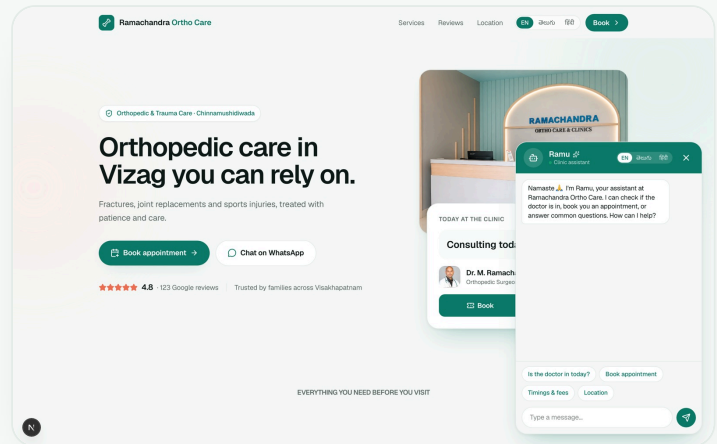

A floating "Ask Ramu" button sits on every page. No app to download, no account to create.

- Doctor-in-today status & today's fee
- Consulting hours & location
- What the clinic treats
- Quick-reply chips — no typing required for common questions

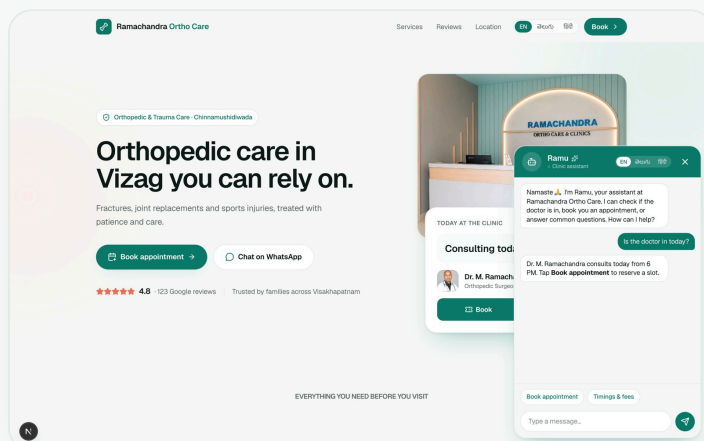

English

తెలుగు Telugu

Switches mid-chat

Ramu opens with a greeting and four quick-reply chips.

A real exchange — "Is the doctor in today?" answered instantly, with follow-up chips.

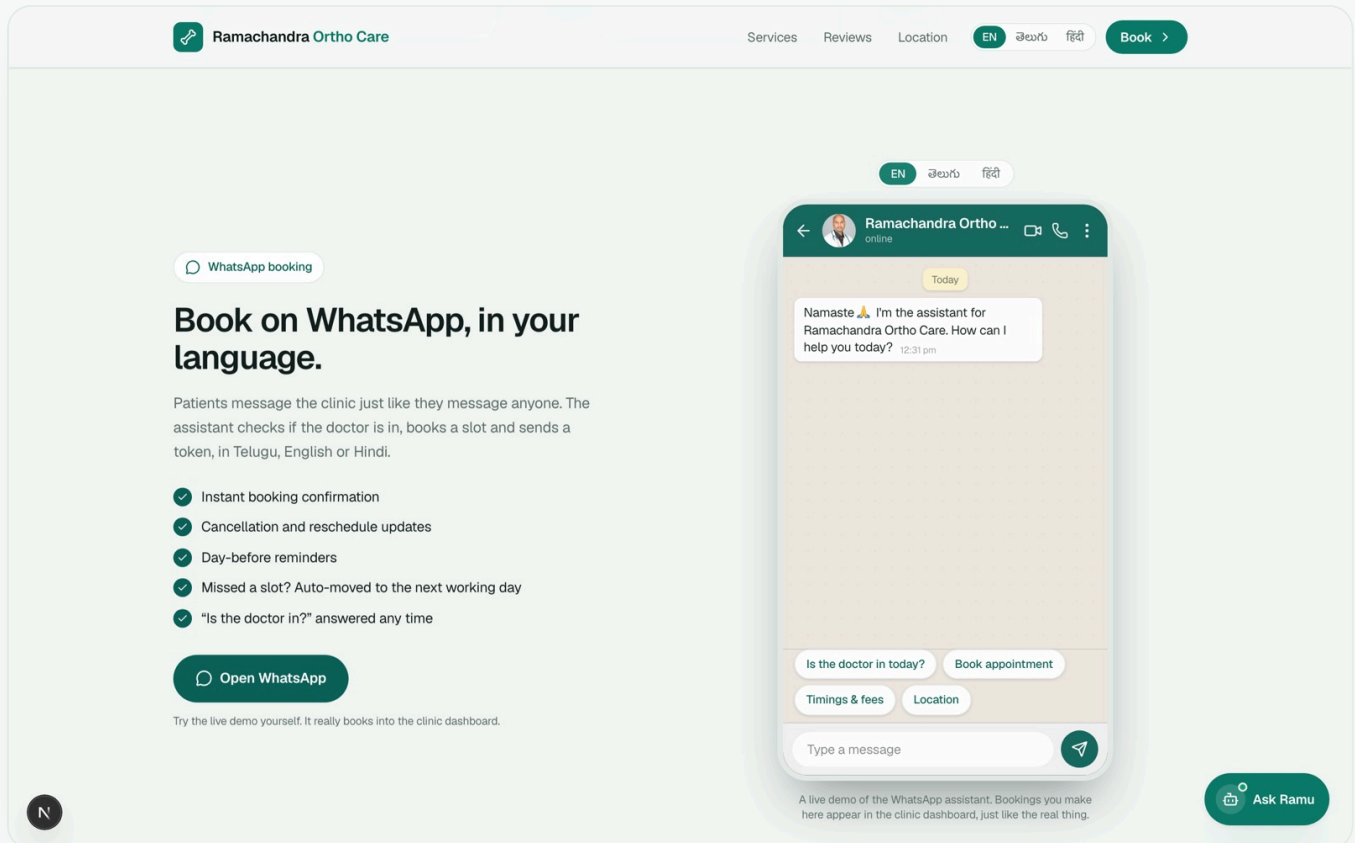

Same brain as WhatsApp

Ramu runs on the same logic built for the clinic's WhatsApp booking flow — so the answers a patient gets on the site match what they'd get messaging the clinic directly. Nothing to keep in sync by hand.

MODULE B, CONTINUED

Built for WhatsApp, shown on the site today

The homepage includes a live demo of what the WhatsApp experience looks like — the same conversational flow, styled exactly like a WhatsApp chat, so patients (and you) can see it before it's fully automated end to end.

"Book on WhatsApp, in your language" — an interactive phone mockup, live on the homepage.

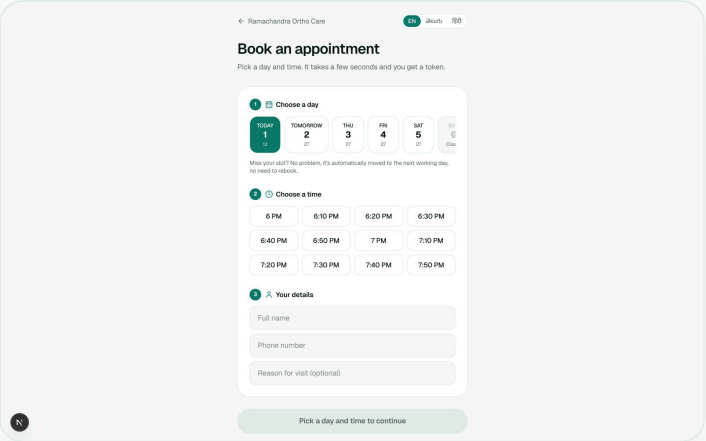

STATUS

The conversation logic, database, and message templates are all built and tested. What's left is wiring the automatic send through Meta's WhatsApp platform directly — see the progress overview on page 2 for the honest detail. Until then, staff send confirmations manually, which takes about a minute per booking.

MODULE C

Online appointment booking

A patient can book without calling the clinic at all — pick a day, see real open slots, confirm with their name and phone number.

The /book page — day picker, live 10-minute slots, and the confirmation form.

What makes it reliable

- Slots are checked against the real database — two patients can never grab the same slot
- 10-minute appointment windows, matching how the clinic actually runs
- Closed days and past times are simply not offered — no dead-end bookings
- A confirmed booking shows up immediately in the admin dashboard's live queue

WHY IT MATTERS

Every booking made here is instantly visible to the front desk — no separate system to check, no risk of it getting missed.

MODULE D

The admin dashboard

What the front desk (and you) actually work from all day — today's queue, the weekly schedule, patient history, and revenue, in one private screen.

WHAT'S AHEAD

Next steps

The one thing left on the list, and why it's worth finishing.

Fully automatic WhatsApp confirmations

Currently manual — front desk sends the confirmation/cancellation text after each booking. The WhatsApp Business account is verified and live with Meta; the last step is Meta approving the wording of the texts themselves, and it switches on by itself, with no change to anything patients or staff already do.
