

PATIENT JOURNEY & WHATSAPP WALKTHROUGH

What a patient sees, start to finish, on the website and on WhatsApp.

A step-by-step walkthrough of booking, confirmations, reminders, payments, rescheduling and cancellations, showing exactly how each WhatsApp message lands on a patient's phone, alongside real screenshots of the site and admin dashboard.

START TO FINISH

Every step, in order

A patient can enter this journey from the website or straight from WhatsApp, and can drop into "manage my appointment" from either one at any point. Every automatic WhatsApp message below is covered in detail on the pages that follow.

1 Patient books an appointment Website or WhatsApp

Picks an open day and a real 15-minute slot on the /book page, or does the same thing by chatting with RC directly on the website or on WhatsApp, no form at all. Slots are checked against the live schedule, so two patients can never take the same one.

2 Booking confirmed WhatsApp, automatic

The moment a booking is saved, a confirmation template lands on the patient's WhatsApp with their name, day and time, and token number. No staff step.

3 Reminder before the visit WhatsApp, automatic

A scheduled job sends a reminder template with a tappable "View your appointment" button that opens the patient's own booking directly, phone number already filled in.

4 Patient visits, pays the consultation fee Website

From the My Appointment page the patient taps Pay Now, which opens a secure Razorpay payment link for the exact fee. Once paid, a payment received template confirms it on WhatsApp.

5 Plans change: reschedule or cancel Website or WhatsApp

On the website, changing someone else's appointment requires proving the phone number is really theirs, a one-time code sent over WhatsApp. On WhatsApp itself, the sender's own number already is that proof, so no code is needed there.

6 Staff can notify the whole queue Admin dashboard

Running late, or closing early? The front desk sends a clinic notice template to everyone booked in today, straight from the admin dashboard, in one tap.

7 Bringing a past patient back Admin dashboard

For a patient who has visited before but never messaged the clinic on WhatsApp, staff can send a one-tap welcome template with a direct booking link and a call button.

STEP 1

Booking online, or in a chat

A patient picks a day, sees only the slots that are actually open, and confirms with their name and phone number, on the /book page or by simply chatting with RC on the website or on WhatsApp instead. No account, no app to install, either way.

The screenshot shows a web form titled "Book an appointment" with the instruction "Pick a day and time. It takes a few seconds and you get a token." The form is divided into three main sections: 1. "Choose a day" with a calendar grid showing days 1 through 6, where day 1 is selected. 2. "Choose a time" with a grid of 15-minute slots: 6 PM, 6:10 PM, 6:20 PM, 6:30 PM, 6:40 PM, 6:50 PM, 7 PM, 7:10 PM, 7:20 PM, 7:30 PM, 7:40 PM, and 7:50 PM. 3. "Your details" with input fields for "Full name", "Phone number", and "Reason for visit (optional)". A green button at the bottom says "Pick a day and time to continue".

The /book page: day picker, live 15-minute slots, and the confirmation form. RC on WhatsApp books the exact same slot, in a chat, no form.

Step 2: the confirmation lands instantly

As soon as the booking saves, this message reaches the patient's WhatsApp automatically, no staff involvement.

Template: `ortho_appointment_confirmed`

SELF-SERVICE, IN CHAT

Ask RC to find or move an appointment

Alongside booking, timings, fees and location, RC looks up a patient's own appointment and walks them through moving it, on the website chat and on WhatsApp, using the same day-and-time picker as booking.

RC's greeting includes "View my appointment" and "Reschedule" alongside booking and availability.

How it works

- **View my appointment:** patient gives their phone number, RC lists every active booking on it, no gate, since this is a read-only lookup, same as opening the My Appointment page.
- **Reschedule:** RC reuses the same day and time picker booking uses. On the website, moving someone's appointment first requires the phone-ownership check described on the next page. On WhatsApp, the sender's own number is proof enough.
- Both work in English, Telugu and Hindi, same as the rest of RC.

NOTHING EXTRA TO LEARN

Reschedule uses the exact same day-and-time picker a patient already sees when booking, so there's no separate flow to figure out.

ANTI-FRAUD GATE

Proving it's really your number

A phone number by itself is not a secret, it can be read off a prescription, a bill, or a forwarded message. So before the website lets anyone cancel, reschedule or pay for a booking, it sends a one-time code to that number over WhatsApp and asks for it back.

What the patient sees

A six-digit code arrives on WhatsApp within seconds. Typing it into the website unlocks cancel, reschedule and pay for that number, for a short window, so a patient handling more than one action doesn't get a fresh code every time.

- Expires in 10 minutes, single use, five guesses before it's locked
- Only requested when someone tries to change a booking, never for a simple lookup
- WhatsApp itself skips this step entirely, since only the phone's real owner can message from it

STEP 3 & 4

Reminder before the visit, receipt after payment

Two more messages patients see without anyone at the front desk lifting a finger.

Template: **ortho_appointment_reminder**

Button opens **my-appointment?phone=...** with the number already filled in.

Template: **ortho_payment_received**

Fires the instant Razorpay confirms the Pay Now link is paid.

WHERE PAY NOW LIVES

From the My Appointment page, a patient with an unpaid booking sees a Pay Now button that opens a secure Razorpay payment link for the exact consultation fee. It is a one-time link generated per appointment, so it is never listed publicly or indexed by search engines.

STEP 5 & 6

Cancellations, and notifying the whole queue

Two messages that keep patients informed when plans change, one from a patient's own action, one from the front desk.

Template: **ortho_appointment_cancelled**
Sent when a patient or staff cancels a booking.

Template: **ortho_clinic_notice**
Sent by staff, from Admin → Broadcast, to everyone booked in today.

MANUAL, ONE TAP

Inviting a past patient onto WhatsApp

For a patient in the records who has never messaged the clinic on WhatsApp, staff can send this from the Patients tab in one tap, no need to type anything.

When staff use it

- A returning patient whose last visit is on file, but who booked entirely by phone or walk-in
- Anyone the clinic wants to re-engage after a gap between visits

One tap on the Patients tab in Admin sends this directly, no typing required.
