

HANDBOOK & PROGRESS REPORT

Everything we've built, working, live at rcorthocare.made-by-ac.com.

A walkthrough of the patient website, the RC AI assistant, online booking, and the admin dashboard — with real screenshots — plus an honest status of what's done and what's still ahead.

WHERE THINGS STAND

Progress overview

Four modules make up the project. The site, booking, and admin dashboard are live and in daily use. WhatsApp is running as a manual flow for now — the reason why is explained on this page, plainly.

4 Modules built	3 Fully live	3 Languages (EN / తెలుగు / हिंदी)	1 Manual workaround, in progress
---------------------------	------------------------	---	--

A. Patient website

100%

Homepage — hero, live "doctor in today" card, services, reviews, hours

Pulls real Google reviews and today's consulting status automatically

Live**Mobile & tablet layout**

Fully responsive — tested on phone, tablet, and desktop

Live**PWA — installable, works from home screen**

Patients can "Add to Home Screen" for app-like access

Live

B. RC — the on-site AI assistant

100%

Answers timings, fees, location, doctor-in-today status, and the doctor's background

Same logic that powers the WhatsApp flow, embedded directly on the site

Live**Trilingual — English, Telugu & Hindi, switchable mid-chat**

One tap toggles the whole conversation's language

Live

C. Online booking & admin dashboard

100%

Patient self-booking — pick a day, a 15-minute slot, confirm

Slots update live against the real database, no double-booking possible

Live**Admin — Today's queue, walk-ins, live token/serving number**

Front desk runs the whole day from this one screen

Live**Admin — Schedule, Patients, Revenue tabs**

Consulting hours, patient history, and collections all in one dashboard

Live

D. Automated WhatsApp confirmations

In progress

Booking confirmation / cancellation texts, sent by staff

Front desk sends these manually today — takes a minute per booking, works fine at current volume

Manual for now**Automatic WhatsApp send, no staff step**

The clinic's WhatsApp Business account is verified and live with Meta, and the automated send is wired directly through Meta's own platform, since the WhatsApp reseller we first tried turned out to charge for this even on their free tier. The one step left is Meta approving the exact wording of the confirmation and cancellation texts themselves — a standard review, separate from the verification that already cleared

Wording pending approval**PLAINLY PUT**

Nothing is broken — bookings, confirmations, and cancellations all reach the patient today, just with one manual step for staff. Verification is done; we're closing the last step so it sends itself.

MODULE A

The patient website

The front door — what a patient sees first, on their phone or a desktop, whether they're checking if the doctor is in or looking up the address before a visit.

Homepage — live "Today at the clinic" card shows whether the doctor is in, the fee, and one-tap Book / Call buttons.

What we treat — every listed service, grouped clearly.

Address, phone numbers, and consulting hours — always accurate, pulled from the same schedule the front desk edits.

MODULE A, CONTINUED

Trust signals

Real Google reviews build confidence before a first visit — pulled straight from the clinic's own listing.

What patients say

★★★★★ 4.8 · 123 Google reviews

S

Sai Sanju

5 months ago

★★★★★

Excellent doctor (Dr. Ramachandra sir), very kind, good listener, and good communication with patients, and friendly staff. I am very happy to visit Ramachandra Ortho Care and Clinic.

M

MVS Ravishankar

2 years ago

★★★★★

My father is 85 and got a left femur break. He underwent surgery and recovered excellently within two months. My dad is now walking without a stick and uses stairs daily. We are very happy and grateful.

S

sudheer maggi

a year ago

★★★★★

Best orthopedician in Vizag city. He treated my 1-year-old daughter when she had a pulled elbow, even though the clinic timings were closed. Very friendly, with patience.

S

Sarada Pradeep

7 months ago

★★★★★

I am very grateful to Dr. Ramachandra sir. My son fractured his foot, for which I took him to Ramachandra clinic. Very friendly environment, all the staff are very supportive.

S

surya Beesetti

6 months ago

★★★★★

I had a very good experience at this ortho care clinic. The doctor listened patiently, explained the problem clearly, and suggested effective treatment. The clinic is clean, well-maintained, and the staff is polite and supportive.

V

Vara Prasad

2 years ago

★★★★★

Doctor is very good. He first understands the patient's problem, diagnoses, then gives the perfect solution. He is not commercial. Very friendly with patients.

P

Prasanth M

a month ago

★★★★★

Really very good doctor and expert in orthopedics. Very kind and very friendly doctor.

S

Dr. Ramachandra

10 years ago

★★★★★

I highly recommend Dr. Ramachandrudu for his exceptional orthopedic care. Sir expertly performed my leg operation with precision and professionalism. His approachable nature, patient listening, and clear explanations put me at ease.

S

Dr. Ramachandra

4.8★ across 123 Google reviews, shown right on the homepage.

MODULE A, CONTINUED

Built mobile-first

Most patients will open this on a phone before anything else — so mobile isn't a shrunk-down afterthought, it's the primary layout the site was designed around.

Mobile hero — same live availability card, built for a thumb, not a mouse.

Services on mobile — nothing cramped, nothing hidden behind extra taps.

MODULE B

RC, the on-site assistant

Short for the clinic itself — RC answers the questions patients usually call the front desk for, right on the website, in English, Telugu, or Hindi, any time of day.

Always-visible, one tap to open

A floating chat button sits on every page. No app to download, no account to create.

- Doctor-in-today status & today's fee
- About the doctor — qualifications, experience, rating
- Consulting hours & location, with one-tap directions
- What the clinic treats
- Quick-reply chips — no typing required for common questions

English

తెలుగు Telugu

हिंदी Hindi

Switches mid-chat

RC opens with a greeting and quick-reply chips for every common question.

A real exchange — "Is the doctor in today?" answered instantly, with follow-up chips.

Same brain as WhatsApp

RC runs on the same logic built for the clinic's WhatsApp booking flow — so the answers a patient gets on the site match what they'd get messaging the clinic directly. Nothing to keep in sync by hand.

MODULE B, CONTINUED

The same assistant, on WhatsApp

Patients who'd rather message than browse tap "Open WhatsApp" on the homepage and reach the exact same assistant there — real tappable buttons and lists, not a wall of numbered text to reply to.

Real WhatsApp buttons, not typed numbers

Short menus show as tappable buttons; longer ones, like picking a time slot, show as a proper WhatsApp list. Nothing to type unless a patient wants to.

- Is the doctor in today?
- Book an appointment
- About the doctor
- Timings & fees, and location with directions

One assistant, every entry point

The same conversation logic answers on the website, on WhatsApp, and right after a booking is confirmed, so a patient gets the same answer no matter where they ask, in whichever of the three languages they write in.

English

తెలుగు Telugu

हिंदी Hindi

STATUS

The conversation logic, buttons, and message templates are all built and tested, live on WhatsApp today. What's left is the automatic booking-confirmation send — see the progress overview on page 2 for the honest detail. Until then, staff send confirmations manually, which takes about a minute per booking.

MODULE C

Online appointment booking

A patient can book without calling the clinic at all — pick a day, see real open slots, confirm with their name and phone number.

The /book page — day picker, live 15-minute slots, and the confirmation form.

What makes it reliable

- Slots are checked against the real database — two patients can never grab the same slot
- 15-minute appointment windows, matching how the clinic actually runs
- Closed days and past times are simply not offered — no dead-end bookings
- A confirmed booking shows up immediately in the admin dashboard's live queue

WHY IT MATTERS

Every booking made here is instantly visible to the front desk — no separate system to check, no risk of it getting missed.

MODULE D

The admin dashboard

What the front desk (and you) actually work from all day — today's queue, the weekly schedule, patient history, and revenue, in one private screen.

WHAT'S AHEAD

Next steps

The one thing left on the list, and why it's worth finishing.

Fully automatic WhatsApp confirmations

Currently manual — front desk sends the confirmation/cancellation text after each booking. The WhatsApp Business account is verified and live with Meta; the last step is Meta approving the wording of the texts themselves, and it switches on by itself, with no change to anything patients or staff already do.

DOCUMENT HISTORY

Revision log

DATE	CHANGE
September 2026	First handbook & progress report — website, RC (then called Ramu), booking and admin dashboard live at rcorthocare.made-by-ac.com; WhatsApp Business account verified and live with Meta, automated send pending message-wording approval.
September 2026 (update)	Assistant renamed to RC and now answers "about the doctor" too, with quick-reply chips added throughout; Hindi added alongside English and Telugu; appointment slots moved from 10 to 15 minutes; the homepage's phone-mockup WhatsApp demo was retired in favor of a direct "Open WhatsApp" link, since the real assistant is already live there.

ANY QUESTIONS

Reach out any time — happy to walk through anything in here live, or make changes based on how it feels once you're using it day to day.
