

## PROGRESS UPDATE, CONDENSED

# Everything we've built, at a glance.

The full handbook is attached alongside this for the complete walkthrough with screenshots. This page is the one-minute version: what's live, the new address, and the one piece still switching on.

Step left to go live

## WHAT'S LIVE

### A. Patient website

Live

Homepage shows today's fee and whether you're in, real Google reviews, and every service, mobile-first and installable like an app.

### B. RC, the AI assistant

Live

Answers timings, fees, location, and now the doctor's own background, instantly, in English, Telugu, or Hindi, so patients stop needing to call for the basics.

### C. Online booking

Live

Patients pick a day and a real open slot and confirm it themselves, no double-booking possible against the live schedule.

### D. Admin dashboard

Live

What the front desk runs the day from: today's queue, the weekly schedule, patient history, and revenue, in one screen.

## THE NEW ADDRESS

LIVE AT

**rcorthocare.made-by-ac.com**

Moved off the temporary testing link onto its own domain. Same site, same everything, just the clinic's own name in the address bar now.

## STILL SWITCHING ON

### Automatic WhatsApp confirmations

Wording pending approval

Confirmation and cancellation texts still go out by hand today. The front desk sends them right after each booking, takes about a minute, nothing gets missed. The clinic's WhatsApp number is now verified and live with Meta, the big hurdle. The one thing left is Meta approving the exact wording of the two texts themselves, a standard, separate review.

#### PLAINLY PUT

Once the wording clears, sending switches on by itself. Nothing changes for you, the front desk, or patients.
